AI-assisted product marketing workflow

IBM-informed research and launch work + Jio Finance lifecycle campaigns.

AI-ASSISTED MARKETING · SURYA SHARMA · OCTOBER 2026

INTEGRITY NOTE

> *This is a retrospective portfolio workflow demonstration. It does not claim AI was used in the original IBM or Jio roles; historical Jio KPIs are not attributed to AI.*

IBM: RESEARCH → BATTLECARDS

Context from CV: competitor intelligence across 15+ integration platforms, source-checked battlecards, IWHI Global Availability launch emails, a healthcare landing page and the MUDUM customer story.

Workflow: ground each draft in approved sources; ask AI to structure explicit claims, label missing evidence “not found,” keep fact separate from interpretation, and human-verify every statement before Sales use.

IBM: LAUNCH + CUSTOMER CONTENT

Use approved launch briefs to draft subject-line and email variants; do not invent product availability, dates or outcomes. For landing pages, structure approved evidence into problem, outcome, proof and objection. For customer stories, preserve quotes and metric definitions and require customer / CS / AE approval.

JIO FINANCE: COHORT CAMPAIGNS

CV-reported context includes push CTR increasing from 0.65% to ~2.5%, a 20% lift in product-detail-page visits confirmed through A/B and control-group tests, and campaigns across WhatsApp, SMS and RCS. These are historical marketing outcomes, not AI-attributed effects.

Workflow: start from approved offer terms and non-sensitive cohort descriptions; create variants with one hypothesis each; check eligibility, disclaimers, character limits and CTA; human-approve; measure CTR and downstream conversion against a baseline/control.

REUSABLE PROMPT

> *“Use only the approved brief and source pack. Create variants for the specified audience. Do not invent features, availability, outcomes, dates or numbers. List the source supporting each claim and flag missing inputs. Do not use personal or confidential customer data.”*

MEASURE + GOVERN

Measure draft turnaround, review cycles, source coverage, unsupported-claim rate, asset use, engagement and downstream conversion, plus privacy/compliance exceptions. Use approved tools only and keep confidential or personal data out of unapproved AI systems.

Detailed prompts and examples: **docs/ai-assisted-marketing-workflow.md**.
