Recruiterflow: sales enablement battlecard

Discovery, competitive talk tracks and objection handling.

SALES ENABLEMENT · SURYA SHARMA · OCTOBER 2026

START WITH DISCOVERY

1. Which workflows matter most: sourcing, candidate relationships, client CRM, outreach, placements or billing?
2. Which desk: perm, executive search, temporary staffing or mixed?
3. Which integrations are must-haves, and where is manual work highest?
4. Are you comparing core workflow capabilities, AI agents, or both?

CORE TALK TRACK

> *"Recruiterflow brings recruiting workflows across ATS, CRM, sourcing and outreach together, with additional AI-agent capabilities available through AIRA. The right fit depends on your desk, required workflows and which capabilities you want in your plan."*

COMPETITOR PROMPTS

Bullhorn: Explore staffing complexity, billing, integrations and operating needs. Avoid claims that Recruiterflow is always cheaper or simpler.

Loxo: Confirm sourcing, AI search/agents, outreach and client CRM requirements; recheck current plan inclusion. Avoid "our AI is better."

Crelate: Compare portals, business development, CRM/ATS and AI needs against a current checklist. Do not repeat outdated AI claims.

Recruit CRM: Compare adoption, automation volume and credit usage using realistic scenarios. Avoid "unlimited" or unverified total-cost claims.

OBJECTION HANDLING

Why switch? Ask what fails, how often, who is affected and what evidence would justify switching.

Does AI come with the base plan? Use the approved current plan matrix and clearly separate Platform from AIRA.

Which is cheaper? Compare seats, period, modules, usage credits and implementation assumptions. Third-party prices are not quotes.

BEFORE THE CALL

Check the current plan matrix, prepare a workflow-specific walkthrough, use approved customer proof, and log competitor objections. This is an independent mockup; re-verify all claims. Full version: **docs/sales-enablement-battlecard.md**.
